Triple R depth filter element

Article number(s): EL03002 / E-30 TR-20270

PRODUCT DESCRIPTION

Triple R filter elements are manufactured in Japan. A highly precise production process and strict inspections ensure that every filter element meets the specified requirements. Due to their unique and patented composition, Triple R filter elements are the only ones capable of preventing (solid) particles, water, AND the formation of resin. E-Series filter elements are primarily used as the first filter element in hydraulic systems or for use in (combustion) engines. E-Series = 5 µm absolute | β5 = 1000
