PRODUCT DESCRIPTION

The OSCA 306 series Filter Systems have been developed for purifying, drying, and conditioning hydraulic oil, lubricating oil, and other fluids used in turbines, compressors, and hydraulic presses. This offline system features its own motor-pump combination. This makes it ideally suited for virtually all offline applications. It is designed for 24/7/365 operation and will proactively maintain the connected machine or drive and protect it from downtime. Performance: This system effectively removes all particles, chemical contaminants, moisture, and oxidation products (resins) and fouling in a single pass. It eliminates contamination in fluids that are not removed, or not effectively removed, by standard filters, causing your system to become dirty. In combination with an M300 or D300 H80 filter element, a cleanliness level of NAS 4 | ISO 15/13/10 or better can be achieved. Versatile: The OSCA CS SS series is available in various configurations. Mobile or stationary, with heater, cooler, frequency converters and/or [remote] condition monitoring systems.
