PRODUCT DESCRIPTION

The SE600 BH is specifically designed for filtering hydraulic oil and is connected to the system as a bypass system. Thanks to its self-priming motor-pump combination, the unit operates completely independently of the main process. The system effectively removes contaminants, moisture, and oxidation products (resins)—particles that standard filters typically cannot eliminate. Combined with an M100 or D100 filter element, an oil purity of NAS 4 | ISO 15/13/10 or better can be achieved. The SE600 comes with a separate motor/pump combination; the entire unit can be placed in the optional drip tray.
